

## Site Redevelopment - Medical Office Building Bangor, Maine

Sewall was the lead site engineer for the redevelopment of a former residential property located on Broadway in Bangor. The former brick home and outbuildings were demolished to make room for a new 23,000 square foot medical office building. Sewall provided local and state permitting, representation at city and public meetings along with the design for new landscaping, parking lot, lighting, sidewalk connections, and new utilities as well as the stormwater treatment structures for the property. Sewall also provided the site layout and coordinated the design for a new electric car charging station to be located at the property. Construction was completed in the summer of 2014.
